ACUPUNCTURE

You won't feel the ultra-fine needles, which is the first thing you might think about when you hear "acupuncture." Yes, needles are applied to your body, and they are used to balance the nervous system, reduce tension and alleviate pain. This 5,000-year-old healing practice has been shown to effectively treat such diverse symptoms and conditions as pain, digestive and respiratory disorders, anxiety and depression, headaches and migraines – and that's why we offer it. Acupuncture can also greatly ease side effects, such as fatigue and nausea, from cancer treatments.
